

What's New in Marketron TvSCAN V6.10

Non-LPM Dailies Data Available in Flight Plan, Trender and Estimating

We have enabled the demo skewing methodology for Dailies data in Flight Plan, Trender and Estimating to allow access to non-LPM Dailies data. With just the click of a button you can incorporate Dailies data into a schedule or trender or use them when creating estimate books.

PAV Book Limit Increased

Users are no longer restricted to 20 PAV books in Inventory and other program modules. You can now create as many PAV books as you need.

PAV Columns in Inventory Displayed from Newest to Oldest

The PAV book columns in Inventory are now listed making it easier to update your inventory when new data arrives.

Select PAV Book Columns for Display in Inventory

You can now choose which PAV book columns are displayed on the Inventory worksheet. A new PAV speed button allows you to select which books to turn on or off with just a click.

Progress Bar for Loading Inventory

We have added a progress bar to indicate the status of the inventory loading.

Rearranged Columns in Inventory

We have moved the "Status" column next to the "Sort Code" column for easier management of the programs.

Program Selection Window for Dailies Data

The Program Selection window for Dailies data no longer automatically loads any dates by default, which increases load speed and allows you to choose exactly which dates you wish to view.

Prime Daypart Copy Option for Projection/Estimate Books

We have added an option to copy estimates or PAV assignments for just the Prime daypart from one estimate book or PAV book to another estimate book. This option, in conjunction with the other daypart copy options for sports and specials, allows you to create multiple estimate books without having to duplicate work.

Block Delete Option for Dailies Data

We have added an option to delete all Dailies data prior to a specified date. Just select a date from a calendar to quickly remove large sets of data.

Update Inventory Includes Web Inventory

We have added an option for the Update Inventory & Data Files in Setup to handle the web inventory separately from the television inventory. The "Synch Web Inventory" option allows users to update just their web inventory or to update their television inventory without the web inventory.

If you need assistance, please contact Marketron Broadcast Solutions HelpLine
Available Monday-Friday, 7:30a-7:00p (CT):

Backup & Restore Inventory Includes Web Inventory

We have added an option for the Inventory Backup and Restore in Setup to handle the web inventory separately from the television inventory. You can now backup just web inventory, just television inventory or both for safekeeping.

TAD Operates in Multi-Market Mode

The TapConnect Automatic Downloader (TAD) now works in multi-market mode for clients that have their data market organized. Data for all markets will now download automatically to the appropriate data folders.

All and None Buttons for TAD

We have added All and None buttons to the TapConnect Automatic Downloader selection window to make downloading your data even easier.

TAD Deletes PUT Files for PAV Data

The TapConnect Automatic Downloader will now delete existing PUT files if present when downloading PAV data. This is especially helpful when PAV data is reissued.

SQAD Export to Excel

You can now export SQAD rates to an Excel spreadsheet with the click of one button. The information will be exported in the format currently displayed on the worksheet.

Turn Off Dates on Web Summary Report

The Web Summary Report now has an option to turn off dates. When printing the report, the Report Wizard has a selection box for "Show Dates" you can select to include or exclude the dates.

Main Menu Links to Training Sessions and TvSCAN Forums

We have added a link from the Main Menu of TvSCAN to our training sessions schedule from which you can register for a class and to our new TvSCAN Forums webpage. Click on the **Help** option on the Main Menu at the top of the TvSCAN window to open a drop down menu that includes these new options.

Desktop Shortcut to TvSCAN Forums

We have added a desktop shortcut to the TvSCAN Forums webpage for your convenience. The TvSCAN Forum is a great place to keep up with the latest information on the television industry, data releases and the TvSCAN software. Now you can go there with a convenient shortcut.

Desktop Shortcut to Launch Live Help

We have also added a desktop shortcut to the Launch Live Help chat room. Use Launch Live Help to get quick assistance with the TvSCAN software without having to pick up the phone.

What's New Dialog

Every time you receive a new version of TvSCAN, a What's New dialog will open with a list of the top features in the new version as well as links to What's New and Release Notes docs, help, TvSCAN Forums and our training sessions schedule webpage.

Autosave Option in Flight Plan Invoked More Frequently

The autosave option in Flight Plan will now be invoked more frequently to reduce the risk of losing work due to computer problems and session time-outs for HSP clients.

Revised LTC Inventory Tool

The tool for updating inventory end dates, "Update pre 2000 end dates to 2010," has been revised to "Update pre 2010 end dates to 2020."
